

# Powering Project Efficiency Through Seamless Integration

## TRACKED + PROCORE®

### How This Integration Enhances Your Project Workflows

#### Access Track3D Directly within Procore

Track3D integrates seamlessly with Procore, allowing you to leverage its capabilities directly within Procore. This integration simplifies workflows without switching between tools and enhances collaboration by centralizing project data for your entire team.

#### Enrich RFIs, Submittals, and Observations

Attach images directly from Track3D to enrich RFIs, submittals, and observations in Procore to improve workflows and save time. These clear visuals and precise location data reduce ambiguity, accelerate issue resolution, and enhance collaboration and decision-making.

#### Streamline Design and BIM Access

Access designs and BIM directly in Track3D to save time and simplify the onboarding process by eliminating manual file transfers. This centralized hub ensures your team has the latest and most accurate information, enabling you to focus on strategic tasks.

#### Secure Login with Single Sign-On (SSO)

With SSO, log in to Track3D using your Procore credentials, simplifying access and enhancing security by reducing unauthorized access risks—there is no need for multiple passwords. Track3D ensures flexible connectivity with Procore regardless of your login method.

### How it Works

#### Capture Your Site

Use 360° camera, drones, or laser scanners to continuously capture your site.

#### Cloud Processing

Track3D's AI platform processes all captured data.

#### Document in Detail

Create / Link to RFIs, Observations, or Submittals directly from Track3D.

#### Access and Share

View all captured data, including 360° photos, RFIs, Submittals, Observations, and project plans directly within Track3D.
